ADVANCED SHIPMENT MANAGEMENT

View lists

of containers attached to a shipper including all line items on the ticket that have not yet been packed.

Create

new containers using this screen or change containers that were pre-built during pick ticket creations.

Manage shipping information

Provide the data for an advance ship notice document and give trading partners the ability to scan bar codes to identify box contents, pallet location, and shipment details such as carrier, size, and weight.

Build shipment detail automatically

Build detailed shipment information quickly, easily, and flexibly, and print it on UCC-128 compliance labels – while you’re creating and printing the pick ticket for an order. Create bills of lading and track shipments via the Web.

Set up options with ease

Simply activate Advanced Shipment Management with Order Management and e-Commerce Gateway–EDI Edition, and then choose your setup options, including weight and dimensions calculations, container specifications, carton breaks, and label requirements.

Change or build shipment detail flexibly

Build pallets, assign tare levels, change shipments, and even build shipment detail if container setup options are not activated. Review your pallet hierarchy and print pallet labels.

Monitor shipment status

Quickly check shipment status by searching on PO numbers, serial container IDs, or tracking numbers. Drill down to shipment detail on the bill of lading or open the Shipper details to access your carrier’s online tracking system using your Web browser.

ADVANCED SHIPMENT MANAGEMENT

FEATURES AND FUNCTIONALITY

Efficient Operations

Automatically create pick tickets, build shipment detail for standard-carton and pick-and-pack shipments, and create and print labels. Calculate shipment weight and dimensions by package/shipment based on inventory master data.

Instant Shipment Tracking

Provide customers with quick and precise shipment data. Use the Web to instantly track shipments for carriers such as United Parcel Service of America, Inc., Federal Express, Airborne Express, or Viking Office Products.

Labels and Documentation

Provide all required compliance labels and documentation. Automatically generate and print UCC-128 compliance shipping labels using Teklynx International Label Matrix on any of nearly 350 thermal or thermal transfer printers.

Flexible Bills of Lading

Easily create and print bills of lading for single or consolidated bills, after a shipment is built and the pick ticket is confirmed, by selecting from a variety of specifications.

Customized Classes

Enter individual bill of lading classes per item. All items are summarized by class and you can, for example, indicate whether a particular class is a hazardous material and enter mixed classes within containers.

Detailed Notices

Meet customer requirements for detailed advanced ship notices, without burdening staff with the daunting task of gathering information manually or using incompatible software systems.

Powerful Ticket Options

Place contents of an entire pick ticket in one shipping container which can be set to build automatically during pick ticket creation. Divide standard carton quantities that were pre-built during pick ticket creation.

Specific Container Information

Build container detail information for individual pick tickets line by line, showing each lot/serial number and/or warehouse location for items on the ticket.

Immediate Data Access

Search for shipments and pick tickets by simply clicking a button. Find detailed information fast, including shipment contents and dimensions, shipper and consignee information, references, and charges.
